

Mobile developer assignment

Create an application to show the user's current location and address using [Here Reverse Geocoding API](#).

Add following features:

1. Add the ability to search nearby places by category using [Here Popular Places by Category API](#), and display a selected place on the map.
2. You should support multiple categories selection.
3. You should show the results on a map, either native or Google Maps along with a list.

Do whatever you like to make your implementation cool, engaging, and easy to use...

Bonus:

Add a feature not mentioned here to the app.

You can take a look at all [Here API](#) capabilities.

In any case, whether something is not clear or you want to ask us a question please feel free to contact us.

Good Luck 😊

And may the odds be ever in your favor
